

Dr. Ing. Antonio N...

This architectural elevation drawing depicts a multi-story building facade. The structure is characterized by a regular grid of windows and balconies. The central portion of the facade is distinguished by a vertical blue band, which likely represents a central staircase or a primary entrance. The building is flanked by two contrasting wall textures: a dark, solid material on the left and a lighter, horizontally-ribbed material on the right. The drawing is oriented vertically on the page, with a small human figure at the bottom left for scale.
